N-octyl Bicycloheptene Dicarboximide (CAS #113-48-4) .. 0.62%
OTHER INGREDIENTS: ..................................... 98.45%
TOTAL .............................................................. 100.00%
Spray contains an insect growth regulator, which effectively kills botfly eggs that have been glued to the hairs in the forelegs, shoulders, and back of the body. The eggs are invisible to the naked eye. Adult botflies emerge from pupae in the soil to begin the life cycle all over again. Botflies have been implicated in botfly infestation prevention. If your horse/pony becomes reinfested with adult fleas from outside the house, a Vet-Kem® Flea, Tick And Bot Spray may be reapplied weekly. Do not allow animal to become chilled. Do not use on puppies and kittens under 12 weeks of age.
