

SEADUST

WILDLIFE CONTROLLANT

NATURAL
PLANT & LANDSCAPE
PROTECTION

DEER · ELK · RABBITS · MOLES

All-natural formulation used to protect trees, shrubs, and plants from damage by deer, elk, rabbits, hares and some rodents. Application to yards and landscapes also provides mole control.

ACTIVE INGREDIENT:

Corn oil9.7%

OTHER INGREDIENTS:

Calcium carbonate, corn meal, clam shell, fish oil, alfalfa meal, water.....90.3%

.....100.0%

NET WEIGHT 1 LB. (454 GRAMS)

IDENTIFY THE PROBLEM—Browsing by deer or elk can usually be determined by the uneven tears on leaves and stems, pulling plants from the ground and stripping of stems; tracks and elongated droppings may be evident. Hares and rabbits clip stems at an angle within about 2 feet above ground or higher on snow; tracks and round droppings may be evident without careful examination of the site. Some rabbits and some rodents will also peel bark from the stems. Moles leave rounded piles of soil and ridges in soil.

PREVENT WILDLIFE PROBLEMS—Deer and elk usually damage coniferous trees in winter soon after planting or, in spring after new growth begins. Deer damage landscape plants, gardens, and orchards in spring, summer and winter. Hare and rabbit damage is usually most severe on conifers and shrubs in winter, and on garden and landscape plants in summer. Moles also burrow around plants and cause roots to dry out.

WHEN TO APPLY SEADUST WILDLIFE CONTROLLANT—Prior to winter damage, apply the granular dust to those plants and plant parts expected to be damaged. During the growing season apply after 1 or 2 inches of new foliage has developed. If some damage has already occurred, apply the granular dusts to both damaged and undamaged parts. For moles, sprinkle Seadust in new planting holes. For established plants, place Seadust in shovel slices around plant to intercept burrows.

HOW TO APPLY SEADUST WILDLIFE CONTROLLANT—To protect plants for a few days or longer during dry weather, spray foliage and stems with water and dust with Seadust Wildlife Controllant. This is particularly effective for garden plants against rabbit damage. Additional applications may be needed as new foliage develops. To protect plants for periods of 2 months or more, including periods of rain or irrigation, spray dry foliage and stems with Bond Spreader Sticker (CAS No. 36208-50005) at 3% to 5% solids in water and immediately apply Seadust Wildlife Controllant onto the spreader sticker and let dry 2 hours or more. CAUTION: Adhesive sprays can harm plants if not applied according to the label. Keep Wildlife Controllant and Adhesive Sprays out of the reach of children. For Moles: Use probe or drill to locate 3 burrows around fresh mounds and pour 1/4 to 1/2 cup of Seadust in each hole. Repeat if there are new mole mounds after 1 week. Typically apply about 1 1/2 pounds Seadust per 2500 square feet. Do not exceed 180 lbs. per acre.

STORAGE AND DISPOSAL—Keep dry in air tight glass or heavy plastic containers in a dark location at room temperature. Dispose of according to state regulations.

SUPPLEMENTAL ADHESIVE LABEL—Application: Dust wet foliage or stems except during heavy rain or irrigation. Formulation: Water activated dry adhesive. (Dow Celcolize ER 4400 and feed grade urea). EPA exempted (25b)
