**HOW IT WORKS:**

This product contains natural plant oils that may kill pests such as aphids and mealy bugs. This product may also suppress mites, thrips and powdery mildew. All life is made up of protein molecules. The key is to allow the wash to be effective on the cell walls of the protein molecules.

**MODE OF ACTION:**

This organic wash has the ability to attach to and de-solve NON SALT BONDED CELL WALL PROTEIN. These non salt based proteins are characteristic of insect pests. THE PLANT OILS ATTACK THESE PROTEIN CELLS. This product leave the salt bonded cell proteins alone and unharmed. This product can break down the "glue" that holds insects together and can quickly suppress them. This lower the chance of them producing a resistant strain to this cleaner/wash. This product should not act on the salt bonded cell wall proteins. This result in a safe wash and cleaner when used as directed.
