MOLE SCRAM™

GRANULAR REPELLENT

3X
Action
100% NATURAL

**TRIPLE
ACTION**
*Protection
Against Moles...*

STRONG SMELL
but mild to us
BAD TASTE
*makes moles' food
hard to digest*
LESS FOOD
reduces insect activity

**READY
TO USE**

**Granular Formula with
More Active Repelling Ingredients!**

Gets Rid of Moles
GUARANTEED!

NET WT. **10 lbs.** (4.54kg) Product exempt from EPA registration under Section 25 (b) of FIFRA **CAUTION: KEEP OUT OF REACH OF CHILDREN**

Environmentally Safe ~ Works Faster!

MOLE SCRAM™

READY TO USE ORGANIC REPELLENT

Mole Scram™ is a proprietary blend of natural and organic ingredients that gives you **triple action protection!** Mole Scram repels moles and alters their environment in **three ways:**

- 1 Food tastes bad and their digestive system is disturbed.
- 2 Tunnels and surrounding soil become bad-smelling.
- 3 Insect activity - food for moles - is reduced.

Mole Scram's high concentration of fast acting ingredients also goes farther...

Up to 50% more coverage than other repellents!

Mole Scram™ is an Excellent Preventative Measure too! Spring and Fall applications can prevent the beginning of mole damage in your yard. Mole Scram™ is fully backed by EPIC's industry-best **100% GUARANTEE!**

More Repelling Power • Faster Acting Formula

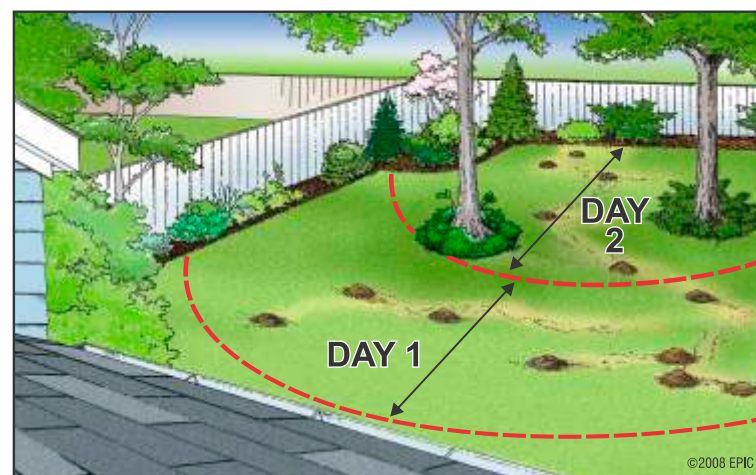

GENERAL APPLICATION:

Determine where you would like the moles to exit your property (refer to the diagram for guidance).

DAY 1 Starting at the point furthest from the exit point, apply Mole Scram™ on and around the mole infested area, water for 20 minutes.

DAY 2 Apply Mole Scram™ to the remaining area near the desired exit, water for 20 minutes.

Where possible, locate mole runways, then punch 1" holes every 10 ft., drop granules into the holes and cover with soil. **Also apply** to the end of each runway and visible holes made by the moles. **Apply 1 lb. per 750 sq. ft.**

NOTE: While Mole Scram is fast acting, it may take a few days for moles to associate their discomfort with the treated areas. Watering or rainfall is the key to activation as it draws the active oils from the granules into the soil. This action rapidly begins the repelling process.

FREQUENCY OF USE:

Mole Scram™ should be applied whenever mole activity - new tunneling - is observed. Mole Scram can also be applied to prevent mole damage at the beginning of Spring and then Fall, the two highest mole activity seasons. Use when soil becomes moist, even during a wet summer season, BEFORE moles begin tunneling.
